OFFICIAL DECLARATION ON GLOBAL PEACE AND ACCOUNTABILITY Statement from the Office of the Founder & Central President The world is currently witnessing a period of unprecedented instability. For over 16 years, the Dr. M. A. Wazed Miah Memorial Foundation (DMWF) and Kabir Group have been working tirelessly for social development, merit-based education, and scientific progress. Our organization has maintained absolute integrity, and in over a decade of awarding International Gold Medals, not a single allegation of bias or corruption has been raised against us. Regarding the Failure of International Systems: We observe with deep concern that the traditional global frameworks, including the United Nations (UN), have failed in their primary duty: maintaining global peace and justice. • Existing institutions have been unable to prevent the aggression and abduction of sovereign leaders. • The long-standing suffering of people in regions like Palestine remains unresolved despite decades of diplomacy. • Conventional 'Peace Prizes' have often become catalysts for unrest rather than tools for harmony. Our Stand as a Non-Political Global Force: We are a non-political entity dedicated to the welfare of every global citizen. Our mission is to build a world based on Merit, Science, and Truth. Because of our clean track record and unwavering commitment, we believe the nations of the world will naturally turn towards us for leadership when traditional systems fail. The Declaration: 1. Accountability: We call upon the United Nations and all global organizations to either deliver concrete solutions to current conflicts or acknowledge their failure and cease operations to make way for new, effective frameworks. 2. Sovereignty: We condemn any act that threatens the dignity and safety of national leaders. 3. A Call to Peace: If the world moves toward a global conflict, we are prepared to issue a global call for peace. We have the support and recognition of global visionaries like Vint Cerf and Dr. Angela Merkel, and we believe the world will respond to our call. The world is moving forward. It is time for a new era of global leadership that is not dictated by power politics, but by the collective development of humanity. "Either provide solutions or acknowledge your failure. Justice will no longer wait, We invite those who prioritize the sanctity of human life and scientific truth over political leverage to align with us in this new journey.

Statement by: A.K.M. Farhadul Kabir Founder & Central President, Kabir Group & Dr. M.A. Wazed Miah Memorial Foundation (DMWF) "We operate as a strictly non-political, global organization. Our mission is centered on social development, standing by the common people, and establishing global peace. For over a decade, we have been awarding International Gold Medals based on merit and integrity. To this day, no one–nationally or internationally–has been able to raise a single allegation against our transparency. This is because we work with the sole objective of human progress through justice and honesty. We are deeply concerned by the current global state. Conventional 'Peace Prizes' have often become catalysts for unrest rather than harmony. Furthermore, we see a disturbing failure in the existing global governance. When sovereign leaders are targeted–as seen in the discussions regarding the abduction of leaders like Maduro or potential threats even towards a German Chancellor–and when issues like Palestine remain unresolved despite decades of diplomacy, it is clear that the current global institutions are failing. If global peace organizations fail to prevent aggression and protect the sanctity of nations, they must acknowledge their failure. Our Declaration: We are a non-political entity dedicated to the welfare of every global citizen. If the world continues to slide toward a global conflict, we will not remain silent. As an organization supported and recognized by global visionaries like Vint Cerf and former German Chancellor Dr. Angela Merkel, we are prepared to issue a global call for action. We urge the United Nations and all international bodies: Either fulfill your mandate to provide real solutions or acknowledge your failures and cease operations. We stand ready to mobilize the voice of the people for a just and peaceful world

The key issues shaping and influencing A CALL FOR A NEW ERA OF JUSTIC: AKM Farhadul Kabir are as follows:

A CALL FOR A NEW ERA OF JUSTICE
Submission of Global Manifesto for Peace,
Sovereignty, and the Establishment of a New World
Order

Below is an excerpt from the transformation map for A CALL FOR A NEW ERA OF JUSTIC: AKM Farhadul Kabir , with key issues shown at the centre and related topics around the perimeter. You can find the full map later in this briefing.

In the following sections, we give a comprehensive summary of the latest **Insights and Trends** shaping the topic, a look at potential **Forecasts and Scenarios** based on current and emerging trends, and an overview of the **Strategic Context**.

Contra la ley de la selva: una alternativa cosmopolita a la geopolítica de las superpotencias

15 January 2026

El mundo está sufriendo un cambio hacia un contexto multipolar, donde la confrontación y la intervención militar evidencian un debilitamiento del derecho internacional y un retorno a la ley de la selva. Las potencias hegémonas buscan expandir su influencia a través de la guerra, reemplazando la cooperación internacional con competencia estratégica. Ante esta situación, el cosmopolitismo emerge como una alternativa viable, promoviendo una visión inclusiva y participativa que permita construir una sociedad democrática a nivel global, aunque enfrenta la resistencia de los Estados nacionales a ceder soberanía.

WSIS+20: What the Final Outcome Delivers – and What It Leaves Unresolved

18 December 2025

The final outcome document of the WSIS 20-year Review, adopted on December 17, emphasizes reaffirming core principles, clarifying institutional roles, and establishing implementation expectations amid a changing digital policy environment. However, it does not address all issues raised during the review. The Global Partnership for Digital Development (GPD) highlighted that legitimacy in digital governance relies on ongoing participation, human rights, and accountability, rather than just consensus.

Why we must act now on tackling antimicrobial resistance

20 January 2026

Antimicrobial resistance (AMR) poses a critical threat to public health and the global economy, endangering effective treatments for various medical procedures and exacerbating conditions like sepsis, particularly among vulnerable populations. Without immediate action, AMR could shrink the global economy by $1.7 trillion by 2050. The Davos Compact on AMR, supported by over 50 leading organizations, emphasizes urgent coordinated efforts across four key areas: innovation and access to new antimicrobials, increasing awareness, sustainable agricultural practices, and multisectoral engagement. Failure to address AMR could lead to millions of deaths globally by 2050.

Unlocking capital for sustainability: Insights Report 2025

05 January 2026

Mobilizing resources through green finance is essential for achieving sustainable development and advancing decarbonization efforts in the Asia Pacific region. The Unlocking Capital for Sustainability 2025 summit convened key decision-makers from finance, business, government, and civil society across six Asian countries. Now in its eighth year and organized by Eco-Business in partnership with the UN Environment Programme (UNEP), the event focuses on mechanisms to unlock capital for a low-carbon future, enhancing financial effectiveness for hard-to-abate sectors, and establishing pathways to a just, net-zero future.

Live from Davos 2026: What to know on Day 2

20 January 2026

Day 2 of Davos 2026 features discussions on artificial intelligence (AI), the U.S. economy, and global cooperation. Key sessions include a conversation on the societal impact of AI with Yuval Noah Harari and Irene Tracey, and a discussion on the path to artificial general intelligence (AGI) led by Demis Hassabis and Dario Amodei. Special addresses from leaders like French President Emmanuel Macron, China's Vice-Premier He Lifeng, and European Commission President Ursula von der Leyen focus on economic challenges, globalization, and energy security strategies. China emphasizes cooperation and market expansion, while the EU addresses geopolitical challenges and trade relations.

The Conversation

Four ways to understand what's going on with the US, Denmark and Greenland

09 January 2026

European countries, particularly Denmark, are grappling with US threats regarding Greenland amidst a shifting geopolitical landscape influenced by recent US foreign policy under Trump. Denmark, historically aligned with US-led initiatives, is reevaluating its foreign stance following the Ukraine conflict, seeking EU support against potential US aggression. The situation reveals broader implications for the EU's relationship with the US and highlights multiple analytical frameworks for understanding these dynamics, including realism, the influence of elite power structures, the decline of the liberal international order, and the interconnectedness of global crises.

Multilateral paralysis is harming global health. Gavi's 'minilateralism' can get us back on track

19 January 2026

Multilateral paralysis is undermining global health, severing essential connections needed to address health challenges. Gavi, the Vaccine Alliance, exemplifies effective 'minilateralism' by fostering collective solutions that prioritize last-mile health needs in vulnerable Global South communities. Amid declining multilateralism, Gavi's approach has successfully vaccinated over 1.2 billion children and created new vaccine markets. A coordinated global health response, exemplified by the 'Gavi Leap,' aims to support nations in developing self-sustaining health systems while preserving capacity to protect vulnerable populations. This model serves as a promising alternative to traditional multilateral frameworks in a fragmented global landscape.

The Conversation

As the US eyes Greenland, Europe must turn a global problem into an opportunity

08 January 2026

The US's covert operation in Venezuela to capture President Maduro has marked a significant decline of the international rule of law, raising concerns about a world governed solely by power. As global governance structures falter, Europe faces a crucial challenge: to unite with allies like the UK, Norway, and Canada to explore a new framework that can replace the defunct world order. The region's economic interdependence and diplomatic strengths position it uniquely to broker peace, but achieving this will require boldness and a commitment to uphold democratic values. Greenland may serve as a catalyst for this necessary awakening in European leadership.

How stablecoins can expand financial access to the most underserved and unbanked

19 January 2026

Stablecoins are becoming essential in expanding financial access for underserved populations by enabling quicker, cost-effective, and transparent transactions. With their emergence, humanitarian organizations have utilized stablecoins, like USDC, to provide critical aid in crisis situations, exemplified by their use in Ukraine. The growth of stablecoins, now valued over $300 billion, indicates their increasing role in global commerce and small business financing. Public-private partnerships can help realize the full potential of these digital currencies, promoting financial resilience and inclusion while leveraging existing systems to bridge access gaps.

World Economic Forum

Three choices for governments that will define our future

19 January 2026

Governments face three critical choices that will shape humanity's future: prioritizing wealth or wellbeing, fostering trust or accepting fragility, and promoting cooperation or allowing fragmentation. The economic expansion of recent decades has not equated to improvements in societal wellbeing, with rising rates of mental health issues and a significant economic cost due to lost productivity. Trust remains an essential asset for governance, yet it has eroded in many societies, leading to a need for strategic rebuilding. Lastly, cooperation is crucial to avoid the economic consequences of fragmentation and to sustain global progress.

2.1 A CALL FOR A NEW ERA OF JUSTICE

Submission of Global Manifesto for Peace, Sovereignty, and the Establishment of a New World Order

PART I: THE GLOBAL REALITY The world is currently witnessing a period of unprecedented instability. We observe with deep concern that traditional global frameworks, including the United Nations (UN), have failed in their primary duty: maintaining global peace and justice. • Institutional Failure: Existing bodies have been unable to prevent the aggression against and abduction of sovereign leaders. • Unresolved Crises: The

long-standing suffering in regions like Palestine remains unresolved despite decades of failed diplomacy. • Political Distortion: Conventional 'Peace Prizes' have often become catalysts for unrest and political leverage rather than tools for genuine harmony. PART II: OUR MISSION & INTEGRITY For over 16 years, the Dr. M. A. Wazed Miah Memorial Foundation (DMWF) and Kabir Group have worked tirelessly for social development, merit-based education, and scientific progress. • Transparency: In over a decade of awarding International Gold Medals, not a single allegation of bias or corruption has been raised against us. • Independence: We are a strictly non-political entity. We believe that when traditional systems fail, the nations of the world will naturally turn towards a leadership built on Merit, Science, and Truth. PART III: THE FOUNDER'S SACRIFICE & APPEAL This mission is not built on grants, but on personal sacrifice. In 2010, I introduced the world's first independent International Gold Medal initiative, gaining global trust through sheer integrity. I began this journey using my father's property and my personal inheritance, seeking no profit –only the upliftment of humanity. In 2015, my commitment was met with an assassination attempt. The perpetrators remain unpunished, reflecting a world where no one–from an ordinary citizen to a head of state–is truly secure from the influence of shadow powers. Despite facing death and sacrificing my wealth, I have not wavered. I know that by challenging the global status quo, I may again become a target. But I am prepared. I now call upon every nation and every individual who seeks true security and peace to align with us. PART IV: THE DECLARATION 1..Accountability: We call upon the United Nations and all global organizations to either deliver concrete solutions to current conflicts or acknowledge their failure and cease operations. 2. Sovereignty: We condemn any act that threatens the dignity and safety of national leaders. No nation should live in fear of external abduction or interference. 3. The Alternative: We invite those who prioritize the sanctity of human life and scientific truth over political leverage to join our journey. "Either provide solutions or acknowledge your failure. Justice will no longer wait.

About Strategic Intelligence

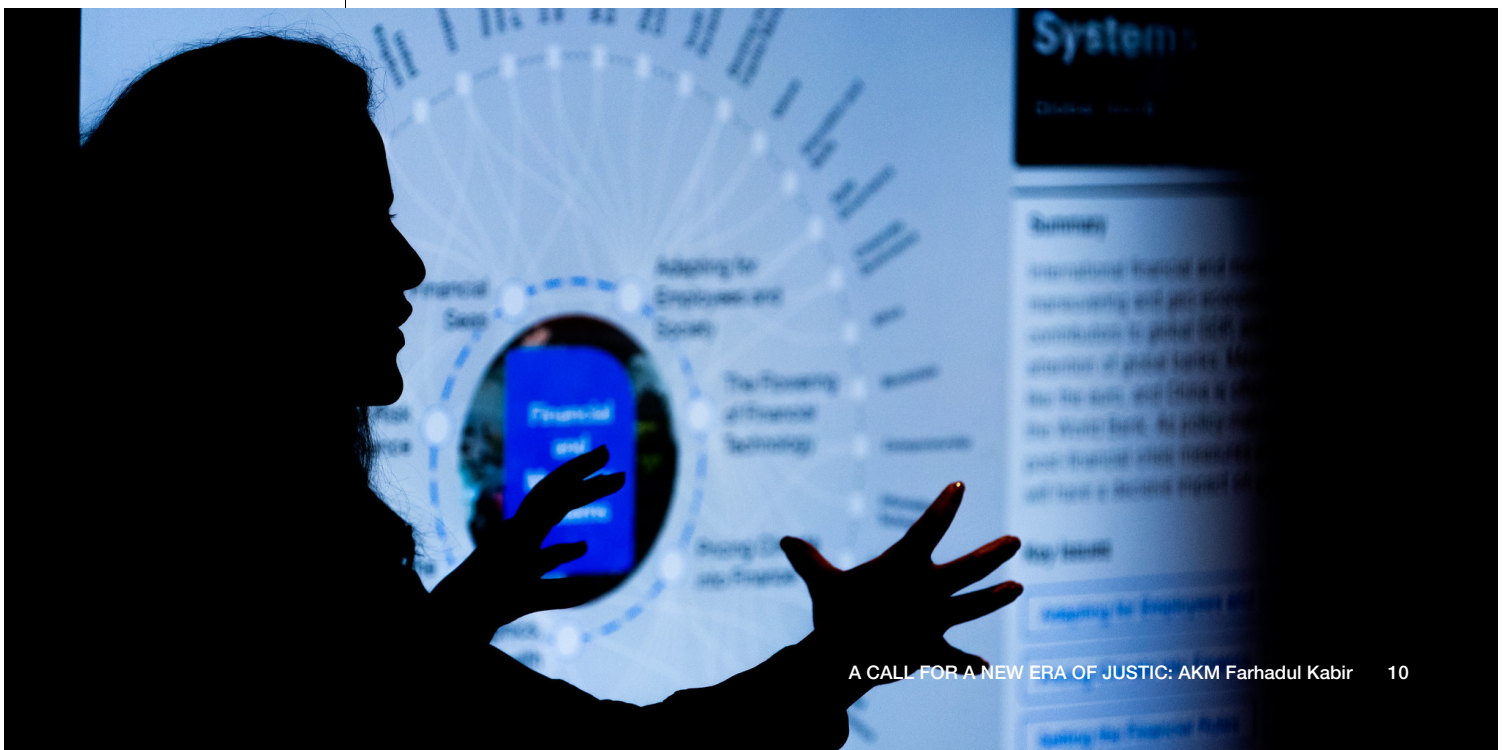
Our approach

In today's world, it can be difficult to keep up with the latest trends or to make sense of the countless transformations taking place. How can you decipher the potential impact of rapidly unfolding changes when you're flooded with information - some of it misleading or unreliable? How do you continuously adapt your vision and strategy within a fast-evolving global context? We need new tools to help us make better strategic decisions in an increasingly complex and uncertain environment.

This live briefing on A CALL FOR A NEW ERA OF JUSTIC: AKM Farhadul Kabir , harnesses the World Economic Forum's Strategic Intelligence platform to bring you the very latest knowledge, data and context from our 300+ high quality knowledge sources. Its aim is to help you understand the global forces at play in relation to A CALL FOR A NEW ERA OF JUSTIC: AKM Farhadul Kabir and make more informed decisions in the future.

Each day, our Strategic Intelligence platform aggregates, distills and synthesizes thousands of articles from around the world. We blend the best of human curation with the power of machine learning to surface high-quality content on over two hundred global issues to our one million users globally. Our hand-picked network of content partners from around the world means that we automatically exclude much of the noisy clickbait, fake news, and poor quality content that plague the Internet at large. We work with hundreds of think tanks, universities, research institutions and independent publishers in all major regions of the world to provide a truly global perspective and we are confident that our data are well positioned when it comes to the intrinsic biases inherent to open text analysis on uncurated content from the Internet. For further context on our approach, you may be interested to read Strategic trend forecasting: anticipating the future with artificial intelligence and These Are The 3 Ways Knowledge Can Provide Strategic Advantage.

↓ A leading expert presenting a transformation map at our Davos Annual Meeting



Overview of methodology

Our Transformation Maps are dynamic knowledge visualisations. They help users to explore and make sense of the complex and interlinked forces that are transforming economies, industries and global issues. The maps present insights written by experts along with machine-curated content. Together, this allows users to visualise and understand more than 250 topics and the connections and inter-dependencies between them, helping in turn to support more informed decision-making by leaders.

The maps harness the Forum network's collective intelligence as well as the knowledge and insights generated through our activities, communities and events. And because the Transformation Maps are interlinked, they provide a single place for users to understand each topic from multiple perspectives. Each of the maps has a feed with the latest research and analysis drawn from leading research institutions and media outlets around the world.

At the centre of each map is the topic itself. This is surrounded by its "key issues", the forces which are driving transformation in relation to the topic. Surrounding the key issues are the related topics which are also affected by them. By surfacing these connections, the map facilitates exploration of the topic and the landscape within which it sits.

The framework extends beyond mapping current trends by incorporating forecasts and scenarios to project potential future states of the system. Forecasts are based on observable patterns, while scenarios explore broader possibilities, including low-probability but high-impact events. These elements contextualize key issues and related topics within potential future trajectories, enhancing strategic thinking and decision-making.

Harnessing collective intelligence from the Forum network and leading research institutions, the maps synthesize diverse insights into a cohesive view. By integrating these insights with the latest research and analysis, the framework provides a comprehensive understanding of how transformations unfold and interrelate, empowering users to navigate the evolving landscape effectively.

Scenarios

In-line with best practice on the use of artificial intelligence in products and systems, in this section we provide full transparency on how artificial intelligence is used in our scenario generation automation.

In complex and fast-moving environments, it is difficult to maintain a clear view of what may change next, and which uncertainties deserve attention. Scenario planning helps by offering a structured way to explore alternative futures, test assumptions and clarify decisions under uncertainty.

We generate scenario packs using artificial intelligence within a defined methodology and on which we have been guided by our Global Strategic Foresight Community. The process follows the same broad logic used in scenario workshops: move from issue framing, to key uncertainties, to a 2×2 matrix, and then to four distinct scenario narratives. In an automated setting, each step includes validation to avoid weak axes and indistinct scenarios.

Each scenario pack included in our briefings includes a 2×2 scenario matrix defined by two critical uncertainties (axes), four scenario narratives and a *throughline* that connects each scenario back to the matrix.

Our process is as follows:

1. Topic framing and inputs. First, we ground our scenario design in our high-quality, expert curated content. Our topic summaries, key issues and related knowledge are used to anchor scenarios in the topic space.

2. Abstraction of underlying forces. Topic issues are often technical and uneven in granularity. Our AI agents abstract them into a small set of cross-cutting forces and tensions that can support scenario work across domains. This creates a conceptual frame that is usable for uncertainty and axis generation.

3. Identification of drivers and uncertainties. From that conceptual frame, an AI agent identifies drivers that could shape outcomes and that carry genuine uncertainty. Drivers are defined with directional poles so that they can support different regime logics rather than incremental variation.

4. Axis generation and validation. An AI agent then proposes multiple candidate axes of uncertainty and

another agent then evaluates them against criteria commonly used in facilitated scenario work: strength of the tension between poles, relevance to the topic and its drivers, and decision utility, meaning whether different positions would change strategic choices. Candidate axes are then combined into matrix pairs and tested for distinctiveness. This step is designed to avoid quadrant ”collapse”, where scenarios converge in practice despite different labels. Candidate pairs that do not yield clearly differentiated quadrants are rejected and alternatives are tried.

5. Quadrant blueprints using STEEPLE. Once an axis pair is selected, our AI develops a structured blueprint for each quadrant. Blueprints define the internal logic of that world and describe how the system behaves across STEEPLE domains (Social, Technological, Economic, Environmental, Political, Legal and Ethical), with attention focused on the domains that are most consequential for that quadrant. This stage is designed to establish coherence and contrast before narrative writing begins.

6. Grounding and counter-grounds. Our AI then builds an evidence set from the Strategic Intelligence knowledge base, drawing on our curated network of trusted content partners. Evidence is used to strengthen and challenge the emerging interpretation of each quadrant. In practice, our AI compiles supporting evidence for key mechanisms implied by the blueprint, as well as counter-evidence and constraints that suggest limits, failure modes or alternative dynamics. This step functions as a stress test. It identifies claims that are too thin, overly linear, or inconsistent with available knowledge, and it provides material used to refine the narrative direction before writing begins.

7. Narrative development within a constrained world. Once a narrative direction has been selected for a quadrant, our AI produces the scenario narrative within a constrained ”world”, mirroring workshop practice where participants explore a defined quadrant logic and then build out a coherent future state. At this stage, our models are instructed to remain consistent with the quadrant blueprint, incorporate supporting evidence where it adds credibility and specificity, reflect counter-evidence as tensions, constraints, trade-offs or contested dynamics, and describe a plausible future state rather than a transition story, prediction or recommendation. The result is a scenario that remains anchored to a defined structure while allowing creative exploration of how that structure could plausibly play out. Our AI also generates a short throughline for each scenario explaining how it expresses its position on the axes, as well as a matrix summary describing the uncertainty space and what differentiates the four futures.

8. Quality checks and transparency. Finally, an AI agent performs quality checks intended to prevent common failure modes in automated scenario generation: axes that lack meaningful tension or strategic relevance, quadrant ”collapse” where scenarios become minor variations of the same future, internally inconsistent causal logic across STEEPLE domains, and narratives that drift away from the quadrant blueprint. Intermediate artefacts (candidate axes, evaluations, quadrant blueprints, and grounding materials) are retained so results can be reviewed, compared over time, and improved.

We welcome feedback on our approach as we continue to refine and evolve our use of artificial intelligence in strategic foresight.
